

## History of Python:-

- ✓ Invented in the Netherlands, early 90s by Guido van Rossum
- ✓ Named after Monty Python
- ✓ Open sourced from the beginning, managed by Python Software Foundation
- ✓ Considered a scripting language, but is much more
- ✓ Scalable, object oriented and functional from the beginning
- ✓ Used by Google from the beginning
- ✓ Designed to be portable and extensible
  - ◆ Originally implemented on UNIX
  - ◆ Programs often can be ported from one operating system to another without any change
- ✓ Syntax and design promote good programming practices and surprisingly rapid development times
  - ◆ Simple enough to be used by beginning programmers
  - ◆ Powerful enough to attract professionals

## Why Python:-

- ✓ There are a LOT of different programming languages out there
- ✓ Python is one of the easier ones to learn
- ✓ There are lots of free tools out there you can use to code or learn Python
- ✓ There are a lot of different ways to use Python code
- ✓ Python is **cross-platform** desktop application that has a native look and feel on every operating system
- ✓ **PEP8** is a guiding principle as to how you should write your code to make it more readable
- ✓ In order to develop web apps we use **Django** and **Flask**
- ✓ with Python we can develop Home automation on **RaspBerry Pi** board

TIOBE Index for April 2018

TIOBE Programming Community Index

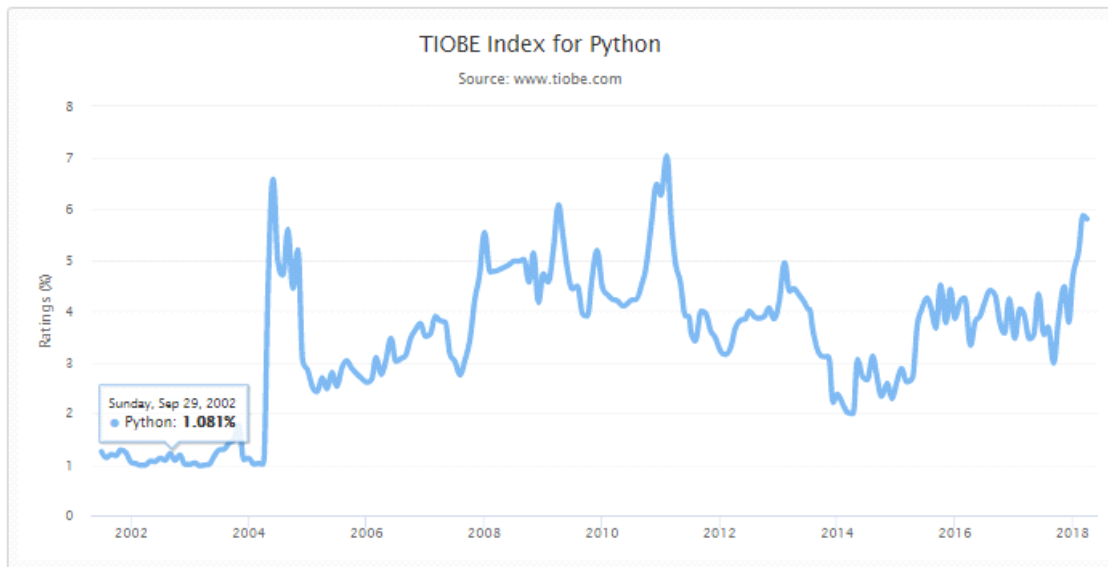

Source: [www.tiobe.com](http://www.tiobe.com)

📈 Highest Position (since 2001): #4 in Apr 2018

📉 Lowest Position (since 2001): #13 in Feb 2003

🏆 Language of the Year: 2007, 2010

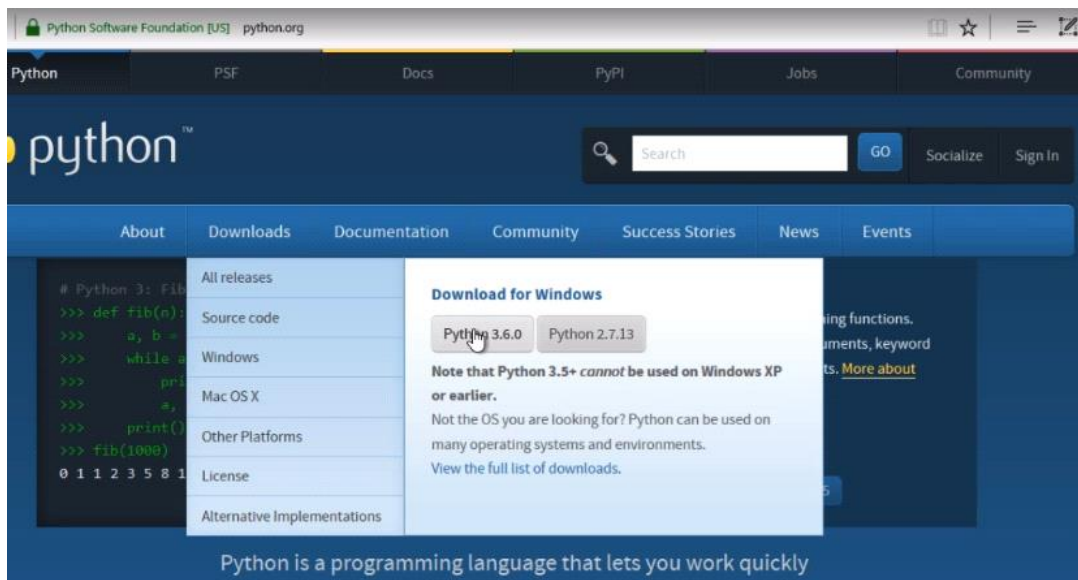

## Python 2 vs Python 3

Python 2	Python 3
Maintained, but no new features	New features being added
End of Life (EOL) in 2020	Unicode support by default
Still default on many systems	Cleared some Python 2 confusion
<code>print "Hello World"</code>	<code>print("Hello World")</code>
	Minor differences from Python 2

So how do I get started?

## Installing Python

## Installing PyCharm

Python IDE  
for Professional Developers
